## F O R E W O R D

THIS ANNUAL REPORT IS COMPILED BY THE TENNESSEE STATE AGRICULTURAL STABILIZATION AND CONSERVATION SERVICE (ASCS) TO PROVIDE PROGRAM DATA AND STATISTICS ON THE OPERATIONS OF OUR COUNTY ASCS OFFICES DURING 1974.

THE AGRICULTURAL STABILIZATION AND CONSERVATION SERVICE IS THE AGENCY OF THE U. S. DEPARTMENT OF AGRICULTURE THAT ADMINISTERS SPECIFIED COMMODITY AND RELATED LAND USE PROGRAMS DESIGNED FOR VOLUNTARY PRODUCTION ADJUSTMENT, RESOURCE PROTECTION, AND PRICE, MARKET, AND FARM INCOME STABILIZATION.

OUR APPRECIATION IS EXTENDED TO COUNTY AND COMMUNITY ASC COMMITTEEMEN, COUNTY OFFICE PERSONNEL, REPRESENTATIVES OF OTHER AGRICULTURAL AGENCIES, FARMERS, AND FARM ORGANIZATIONS WHO CONTRIBUTED TO THE SUCCESS OF OUR FARM PROGRAM IN 1974.

## ADMINISTRATIVE

The Administrative activities, supervised by the State Office for the 95 counties in Tennessee, deal primarily with management, personnel, training, budget, fiscal, office space, equipment and supplies.

Allocations of administrative funds are computed on the basis of a measured volume of work and basic costs for operating each county.

The State Office assists counties in obtaining adequate space with satisfactory arrangement, lighting, utilities, and parking. In many instances this space is in the same building with other agencies of the Department.

Guides on the type and quantity of equipment for proper operation of the office are furnished counties. Inventories are reviewed and approval given for permanent type equipment.

Distribution of all forms and envelopes is made through the State Office. Assistance is furnished to county offices for ordering office supplies through the General Services Administration.

Personnel man-day ceilings are established for each county. Counties are required to obtain approval for changes in the job classifications and for reinstatement of any position that is vacated through separation or resignation. A job description is established for each position.

Elections are held in the fall of each year. Three community committeemen and two alternates are elected in each ASCS community in the county. These community committeemen, in turn, elect one county committeeman each year for a three year term and two alternates for a one year term beginning on January 1.

## CONSERVATION PROGRAMS

### RURAL ENVIRONMENTAL ASSISTANCE AND RURAL ENVIRONMENTAL CONSERVATION PROGRAMS

The Rural Environmental Assistance Program (REAP), and the Rural Environmental Conservation Program (RECP), successors to the ACP, are voluntary cost-share programs. They offer cost-sharing (generally on a 50-50 basis) with farmers to carry out needed conservation and environmental measures. Program emphasis is on long-term farm-related conservation and environmental problems in rural areas. Practices with substantial public benefits at the least possible public cost are given highest priorities. Higher cost-share levels are authorized for low-income farmers (up to 80 percent). Major considerations in authorizing cost-sharing are the resulting public benefits, such as pollution abatement, enduring soil and water conservation, recreation, wildlife and open space.

The 1974 RECP also provided for long-term cost-share agreements (LTA's) up to 10 years to help farmers carry out their conservation plans in an orderly manner. Under this arrangement cost-sharing is obligated for specific practices to be installed over a period of time in accordance with a conservation plan of operations developed with SCS technical assistance. The Forestry Incentives Program (FIP) was also implemented in 1974 under the RECP. This program authorizes cost-sharing up to 75 percent of costs to eligible persons for tree planting and timber stand improvement measures in an effort to encourage increased timber production. Eligibility is limited to ownership tracts of 500 acres or less which are capable of producing industrial wood crops. Cost-sharing is based upon a forestry management plan developed with Forest Service assistance. This assistance is usually arranged through the State Forestry Division's operating services. The 1973 REAP was operated in 1974 under a court order reinstating the program which was terminated prior to the 1973 calendar year. The 1974 RECP was the regular conservation cost-share program in effect for 1974. It retained some aspects of the former REAP but placed more emphasis on permanent long-term conservation practices.

### EMERGENCY CONSERVATION MEASURES

Emergency Conservation Measures are authorized in designated disaster areas, where needed, to rehabilitate farmland damaged by natural disasters.

In 1973 special emergency assistance was approved in 43 counties to correct damage to farmland caused by excessive rainfall and flooding. Twenty-seven of these counties had operations continued into 1974 to complete unfinished work. In addition, 13 counties were approved for emergency assistance to repair farmland damages caused by tornadoes occurring in April, 1974. Available emergency funds permitted farmers in these counties to repair or correct land damages caused by these natural disasters and/or to prevent further deterioration or erosion of productive farmlands. Without this emergency assistance the newly created conservation problems would have further impaired the land and

adversely affected its productive capacity. The necessary repair or restoration work would have been so costly that the farmers would have been unable to carry out the needed conservation measures without emergency cost-sharing which amounted to about 80 percent of treatment costs.

#### APPALACHIAN LAND STABILIZATION AND CONSERVATION PROGRAM

The Appalachian Land Stabilization and Conservation Program is authorized only in certain designated counties in the Appalachian states. The program provides assistance for land stabilization, erosion and sediment control, reclamation and conservation treatment measures. This is accomplished through long-term cost-sharing contracts (3 to 10 years) with land owners and operators in the designated areas. Federal cost-shares range up to 80 percent of treatment costs. Cost-sharing is limited generally to not more than \$50 per acre for a maximum of 50 acres per farm. Counties designated for this program are located in areas having the greatest economic growth potentials. The currently designated program includes the Roaring River Watershed portion of Jackson, Overton, and Putnam Counties.

#### CROPLAND ADJUSTMENT PROGRAM

The Cropland Adjustment Program was designed to divert the use of cropland from the formerly unneeded production of feed grain and allotment crops on a long term basis to needed conserving uses. Agreements with eligible producers were offered in 1966 and 1967 for periods of from 5 to 10 years. The program supplemented the annual commodity acreage diversion programs and, through Greenspan, provided for more open space and other recreational opportunities for urban areas. Specific incentives were offered to farmers if they shared their land facilities with the public (public access). Emphasis was given to the development of hunting and fishing areas through conservation practices designed to foster wild-life. Some of the existing CAP agreements will remain in effect through 1976. Agreement signers are offered the option to terminate agreements and devote the land to other uses or to graze the designated acreage or harvest hay from it with reduced payments.

#### CROPLAND CONVERSION PROGRAM

The Cropland Conversion Program was offered on a pilot basis during the period 1963-67 for agreements up to 10 years. The program was designed to improve family farm income by helping farmers convert cropland, primarily used for production of surplus row crops and small grains, to long-range income producing uses, such as forests, grass, water storage, wildlife habitat, or recreational facilities. Some of the existing agreements will be effective through 1975 in one county.

THE AGRICULTURE AND CONSUMER PROTECTION ACT OF 1973

AS APPLICABLE TO THE

WHEAT, FEED GRAIN, AND UPLAND COTTON PROGRAMS

The Agriculture and Consumer Protection Act of 1973 is a four-year program designed to attract the farm production that is needed to meet domestic and foreign demand for food and fiber. It accomplishes this by creating a favorable climate within which farmers may respond to market signals that indicate consumer demand and produce the crops that are needed at home and abroad.

New with this Act is the concept of guaranteed or "target" prices and deficiency payments for the three commodities -- wheat, feed grains, and upland cotton. Deficiency payments will not be made as long as the average market price received by farmers during the first five months of the marketing year -- or in the case of cotton, during the calendar year in which the crop is planted -- remains above the target level.

The Act establishes target prices for 1974 and 1975 crops and includes an escalator provision for 1976 and 1977 crops.

The "target" prices established for 1974 are:

Feed Grains

Barley - \$1.13 per bushel.

Corn - \$1.38 per bushel.

Grain Sorghum - \$1.31 per bushel.

Wheat - \$2.05 per bushel.

Upland Cotton - 0.38 cents per pound.

No deficiency payments were made in 1974 because the average market prices received by farmers for wheat, feed grains and cotton were above the target level.

Another new provision of the farm bill is one under which a producer may qualify for payments when prevented by natural disaster from planting any portion of his wheat, feed grain or cotton allotment, or when he is prevented from harvesting at least two-thirds of the normal production of his wheat, feed grain or cotton allotment.

Other highlights of the farm bill are:

Increase in the type of crops that may be substituted for wheat, feed grains, or cotton to preserve allotment history.

No "set-aside" provision was applicable for the 1974 crop year.

No "conserving base" requirement for the life of this farm program.

No restriction on plantings of wheat, feed grains, or upland cotton.

Planting of wheat or feed grains not required to be eligible for program benefits.

Except for the disaster provisions, producers must plant cotton to be eligible in any year for program benefits.

The total amount of payments which a person can receive under the feed grain, wheat or upland cotton programs, or a combination of the programs, is \$20,000. This limitation does not apply to loans or purchases under the program.

PEANUTS - 1974

Peanuts are under acreage allotments and marketing quotas. Such quotas are established each year by the Secretary of Agriculture. They are effective only when at least two-thirds of the growers voting in a referendum favor such quotas. This is a means of controlling production and guaranteeing the farmer a favorable price for his peanuts through the Price Support Program. On December 6-10, 1971 growers voted in a referendum favoring quotas for the years 1972, 1973, and 1974.

RICE - 1974

Tennessee is one of the rice producing States designated as a "Producer State." The Agricultural Adjustment Act of 1938, as amended, provides for the designated States to apportion the State rice allotment among rice producers in the State.

Upon prior approval from the County ASC Committee a producer may allocate his producer rice allotment to a farm in another county that has the capabilities for rice production.

## TOBACCO PROGRAM - 1974

Marketing quotas for burley tobacco under a poundage program were in effect. The Secretary proclaimed the quotas which growers voting in a referendum overwhelmingly approved for 1974, 1975 and 1976.

Acreage allotments were in effect for fire-cured and dark air-cured tobacco. Growers voted in a 1973 referendum favoring quotas for 1973, 1974 and 1975.

The quotas in pounds or acres mean controlling production and assuring the farmers of a reasonable price for the tobacco under a price support program. Growers who planted within their acreage allotments of fire-cured and dark air-cured and did not use DDT or TDE were eligible for price support on the entire crop. The burley growers with quotas who did not use DDT or TDE were eligible for price support up to 110 percent of their effective quotas. The undermarketings for 1974 will be added to the 1975 burley poundage quota. Marketings over 100 percent of effective quota will be charged to the 1975 poundage quota.

Lease and transfer programs were available where growers could transfer quotas in case of burley and acreage allotments in case of fire-cured and dark air-cured tobacco between farms within the same county.

## 1974 COMPLIANCE OPERATIONS

The Secretary of Agriculture is required by law to provide for determining acreages of feed grain, wheat, cotton, peanuts, tobacco and rice, when programs are in effect, and to make such other acreage and land use findings as are necessary to determine compliance with the applicable program provisions.

Compliance determinations are made by requiring the farm operator to report and certify the data for his farm. This method is known as COMPLIANCE BY FARMER CERTIFICATION.

COMPLIANCE BY FARMER CERTIFICATION is accomplished by requiring participating farmers to report the acreage of crops and land uses for various programs. It applies to farms participating in the cotton, feed grain or wheat programs. Farmers producing crops subject to marketing quotas, such as peanuts, DAC and DFC tobacco, are required to certify the acreages planted to any of these crops. The operator or farms participating in the REAP, RECP or ECM report their practices. The certification of compliance is required on farms participating in the Cropland Adjustment and the Appalachian Land Stabilization Program.

A portion of the farms for which acreages are reported and certified are visited for administrative control purposes to check the accuracy and reasonableness of reported acreages.

MEASUREMENT SERVICE is available to farm operators upon request and at a reasonable cost. This service may be used to determine the amount of crop to be planted, or the amount of crop already planted, or to establish official acreages for cropland fields that have not been measured previously and also measurement of bins or cribs to determine crop production. The known acreages can be used to reduce cost of production of the crop and assures full program compliance.

AERIAL PHOTOGRAPHY. A part of the compliance operation is maintaining an up-to-date set of aerial photographs for each county in the state. The photographs are enlarged from an aerial negative to a desired scale. New photography is obtained for the entire state every six or seven years. See map "Status of Aerial Photography Coverage" as of December 31, 1974, which shows the latest photography available.

The aerial photographs are to scale accuracy and are used by ASCS in determining acreages devoted to crops and compliance with various program provisions. It has been determined that this is the most efficient and economical means of determining a large number of acreage determinations.

The aerial photographs may be purchased and used by other Federal agencies, state, county and city highway planning groups, by private organizations and individuals who need scaled photographs of large areas in planning their operations. Any person interested in purchasing photographs can obtain information and necessary forms for ordering photographs at any ASCS office or from the State ASCS office.

## PRICE SUPPORT PROGRAMS - 1974

Farmers in Tennessee received price support through loans and purchases on barley, corn, cotton, grain sorghum, soybeans, and wheat. Tobacco was supported through advances from producer associations.

Cotton loan notes were prepared at the county ASCS offices and by approved cotton loan clerks located at banks, gins, and cotton companies. All loans were disbursed by the county offices; however, producers whose cotton notes were prepared by approved cotton loan clerks could obtain advances at the place where their notes were prepared. Loan advances from approved cotton cooperative marketing associations were available to members of the associations.

In conjunction with price support operations ASCS makes loans to farmers for purchase or construction of grain storage and drying facilities. Only commodities which the farmer produces are considered in determining his need and eligibility for the facility. The maximum term of the loan is 5 years. Loans usually are repaid in 4 annual installments. Interest accrues on the unpaid balance and is paid with principal repayments.

### WOOL INCENTIVE PROGRAM

Under the National Wool Act of 1954, as amended, wool is recognized as an essential and strategic commodity not produced in sufficient quantity in the United States. It is the policy of Congress, as a measure of national security and for the general economic welfare, to encourage an annual domestic production of 300 million pounds of shorn wool. The Secretary is directed to establish an incentive price for shorn wool which will encourage the larger production. The National Wool Act, as amended, established the incentive price for shorn wool at 72 cents per pound for the marketing years 1971 through 1977. Payments are made to producers after the end of the year to bring the national average price up to the incentive price. The total amount of payments under the program is limited to 70 percent of the accumulated duties collected on imports of wool and wool products. No payments were made on wool sold during the 1973 marketing year because the national average price was above the incentive price.

### INDEMNITY PROGRAMS

ASCS operates a program for indemnification of dairy farmers whose milk is removed from the market because of pesticide residue content and to manufacturers of dairy products who have been directed to remove their products from commercial markets because of pesticide residues. The intent of the program is that an affected farmer would receive from all sources no more income for the milk than if he had produced and marketed his normal quantity of milk. Beekeepers are indemnified for honeybees damaged or destroyed, through no fault of the beekeeper, by registered pesticide.
